Novel insecticidal protein obtained from species of Paecilomyces for controlling insects, and for insect-resistant transgenic plant production. 

Warner SAJ;

Claim 3; Page 30; 72pp; English.

The present invention relates to novel insecticidal proteins obtained from Paecilomyces sp. (see AAB66899 to AAB66901 and AAB66913). The insecticidal proteins can be used to produce transgenic plants, which are insect-resistant. Also, the insecticidal proteins are useful for controlling insects by providing them at a locus where insects feed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to insecticidal protein comprising an X-glycine motif at the amino-terminus. Polynuclectide or DNA constructs of the invention are useful for producing plants or plant parts: that are resistant to insects. The protein or synergistic combination is useful an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

The invention relates to insecticidal protein comprising an X-glycine motif at the amino-terminus. Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or synergistic combination is useful as an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to insecticidal protein comprising an X-glycine motif at the amino-terminus. The invention relates to insecticidal protein comprising an X-glycine motif at the amino-terminus. Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or synergistic combination is useful an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insectlicidal activity. The present sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                           New insecticidal protein comprising an X-glycine motif a terminus, useful as an active ingredient of a pesticide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    100.0%; Score 194; DB 6;

Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or synergistic combination is useful an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is

The invention relates to insecticidal protein comprising an X-glycine motif at the amino-terminus. Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or synergistic combination is useful an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is
    Antibodies raised to the insecticidal proteins can be used to idenother proteins with insecticidal activity. The present sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Length 34;

Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or synergistic combination is useful as an active ingredient of a pesticide or for controlling insects.
                                                                                                                                                                                                                                                                                                       motif at the amino-terminus. Polymuclectide or DNA constructs of the invention are useful for producing plants or plant parts that are resistent to insects. The protein or synergistic combination is useful an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is
                                                                                                                                                                                                                                                                                      invention relates to insecticidal protein comprising an X-glycine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

The invention relates to insecticidal protein comprising an X-glycine motif at the amino-terminus. Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or synergistic combination is useful an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to insecticidal protein comprising an X-glycine motif at the amino-terminus. Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or synergistic combination is useful an active ingreadient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                         New insecticidal protein comprising an X-glycine motif at the amino-
terminus, useful as an active ingredient of a pesticide.

The invention relates to insecticidal protein comprising an X-glycine motif at the amino-terminus. Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or synergistic combination is useful an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is
                                                                                                                                                                                                                                                         New insecticidal protein comprising an X-glycine motif at the amino-
terminus, useful as an active ingredient of a pesticide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          at the amino-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to insecticidal protein comprising an X-glycine motif at the amino-terminus. Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or synergistic combination is useful as an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is

The invention relates to insecticidal protein comprising an X-glycine motif at the amino-terminus. Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or synergistic combination is useful as an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is insecticidal protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ଚ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 3
448836
fibropellin C precursor - sea urchin (Strongylocentrotus purpuratus)
NiAlternate names: EGF repeat-containing protein; epidermal growth factor-related protein
C;Species: Strongylocentrotus purpuratus (purple urchin)
C;Species: Strongylocentrotus purpuratus (purple urchin)
C;Species: Strongylocentrotus purpuratus (purple urchin)
C;Accession: A48836
R;Bisgrove, B.W.; Raff, R.A.
Dev. B.O.: 526-538, 1993
A;Title: The SpEGF III gene encodes a member of the fibropellins: EGF repeat-containing
A;Reference number: A48836
A;Accession: A48836
A;Accession: A48836
A;Accession: preliminary
A;Molecule type: mRNA
A;Residues: 1-570 cBIS>

TISSUBE-Venom duct;

Kauferstein S.;

Thesis (2001), University of Darmstadt, Germany.

-! FUNCTION: Kappa-conotoxins bind and inhibit voltage-sensitive potassium channels. This toxin inhibits the vertebrate potassium channels KV1.1 and KV1.3, but not KV1.2. It has no effect on HERG-type channels sodium hH1 channels and Kir-type channels (IRK1).
-! SUBELLIUIAR LOCATION: Secreted.
-! TISSUB SPECIFICITY: Expressed by the venom duct.
-! PTM: Contains four disulfide bonds.
-! PTM: Contains four disulfide bonds.
                                                                                                                                                                                                                                                                                   PubMed=12893060;

## ALIGNMENTS

The present invention relates to novel insecticidal proteins obtained from Paecilomyces sp. (see AAB6689) to AAB66901 and AAB66913). The insecticidal proteins can be used to produce transgenic plants, which are insect-resistant. Also, the insecticidal proteins are useful for controlling insects by providing them at a locus where insects feed Novel insecticidal protein obtained from species of Paecilomyces for controlling insects, and for insect-resistant transgenic plant production.                                                                                                                             The invention relates to insecticidal protein comprising an X-glycine motif at the amino-terminus. Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or synergistic combination is useful as an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is Bacillus thuringiensis insecticidal crivity. The present sequence is sequence is used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 420

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The sequence carried on pJH12 which was isolated from B. thurin- giensis strains JHCC4835 and JHCC 4353 (NGIB 40091 and 40090 resp.). The DNA can be used to produce transformants B.coli strain MC12022/pJH12 (NCIB 40278) or bacteriophage EMBL4 vector (NCIB 40279) or E.coli strain BL21/pJH11 (NCIB 40275). The delta-endo- toxin produced by the transformants can be used in formulations for combatting Lepidoptera and Coleoptera pests. (Updated on 25-WAR-2003 to correct PA field.)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         719
                                                                                                                 9
                                                                                                                                  09
and II, to make the hybrid protoxins of the invention. The hybrid toxins of the invention, having structural domains I, II and III in this order starting from the N-terminal derived from at least 2 different crystal proteins, are useful for protecting plants against pest insects, e.g. moths, butterflies and Colorado potato beetle or for combating insects
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       EEVPLLPIYAQAANLHLLLLRDASIFGKEWGLSSSEISTFYNRQVERAGDYSYHCVKWYS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  599
                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                  60
The present invention relates to novel insecticidal proteins obtained from Paecilomyces sp. (see AAB66895 to AAB66901 and AAB6691). The insecticidal proteins can be used to produce transgenic plants, which insect-resistant, Also, the insecticidal proteins are useful for controlling insects by providing them at a locus where insects feed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      motif at the amino-terminus. Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or synergistic combination is useful as an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is Bacillus thuringiensis insecticidal activity. The present sequence is sequence is used in the invention

                                                                                                                                             09
The present invention relates to novel insecticidal proteins obtained from Paecilomyces sp. (see AAB66899 to AAB6691 and AAB66913). The insecticidal proteins can be used to produce transgenic plants, which insect-resistant. Also, the insecticidal proteins are useful for controlling insects by providing them at a locus where insects feed

The invention relates to insecticidal protein comprising an X-glycine motif at the amino-terminus. Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or synergistic combination is useful as an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is Bacillus thuringiansis insecticidal crystal endotoxin (CRY) protein. This sequence is used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      540

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to novel insecticidal proteins obtained from Paecilomyces sp. (see AAB66899 to AAB66901 and AAB66913). The insecticidal proteins can be used to produce transgenic plants, which are insect-resistant. Also, the insectidal proteins are useful for controlling insects by providing them at a locus where insects feed

Paecilomyces sp. WO200100841-A1 Novel insecticidal protein obtained from species of Paecilomyces controlling insects, and for insect-resistant transgenic plant

Claim 14; Page 62-64; 72pp; English

production

```
Ä
resistant to insects. The protein or synergistic combination is useful as an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is Bacillus thuringiensis insecticidal crystal endotoxin (CRY) protein. This sequence is used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         599
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   009

                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                            The present invention relates to novel insecticidal proteins obtained from Paccilomyces sp. (see AAB66899 to AAB66901 and AAB66913). The insecticidal proteins can be used to produce transgenic plants, which insect-resistant. Also, the insecticidal proteins are useful for controlling insects by providing them at a locus where insects feed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          motif at the amino-terminus. Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or synergistic combination is useful as an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is Bacillus thuringiensis insecticidal activity. The present sequence is sequence is used in the invention
